

UNLIMITED FINISHES

The finished panelling system affords enormous creativity and flexibility by blending popular holing configurations (PegWall and SlotWall) with major finish categories including timber veneer, vinyl, laminates and Colour-Cote (painted). Enhancing the merchandising and feature wall concept, P5 offers more options and flexibility than any other system available on the market.

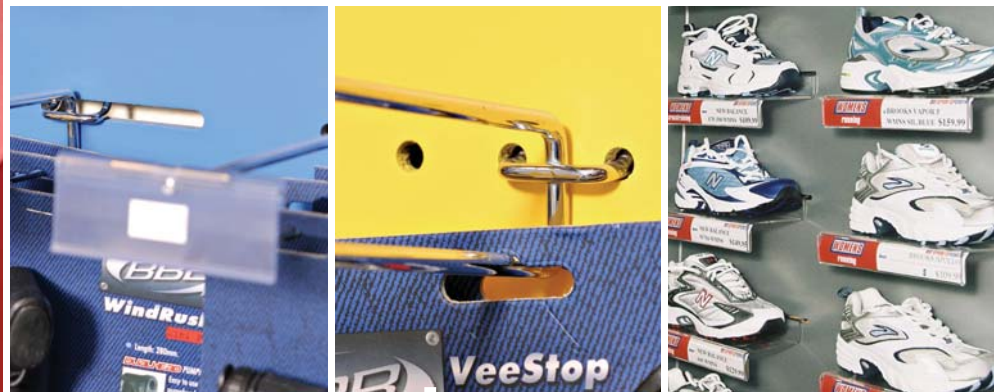

SUPERIOR STRENGTH

New 'super strong' PegTuff is designed to outperform any comparable hardboard product available on the market. Manufactured to comply with the requirements for AS1859.4, 2001, PegTuff is a tough, high-density hardboard with superior strength and resistance to water absorption.

ENVIRO-FRIENDLY

Australian Hardboards products are environmentally friendly, utilising what has previously been regarded as waste material in an ecologically sustainable manner. This waste material, consisting of sawmill residue and forest thinnings, uses only naturally occurring wood glues (lignins) to bond fibres, eliminating the need for synthetic glues and resins.

natural

INNOVATIVE DESIGNS

Specially designed to offer unparalleled functionality in design and application, P5 promotes 'total design flexibility' by merging natural hardboard technologies with modern merchandising and visual display solutions.

It can be shaped or curved and offers popular holing configurations in both PegWall and SlotWall (traditional Pegboard also available). These holing configurations have been re-engineered to provide designers and retailers with unequalled display versatility and are fully complemented by well recognised merchandising accessories from the peghook and grooved panel products range.
