

▲ SHELF SYSTEMS

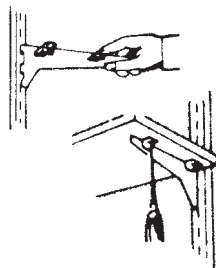

▲ EASY TO FIX

1. Fixing the stripping to the wall, making sure that they are vertical, and with the brackets in place, check for level. To lock brackets into position, tap down firmly with a hammer.

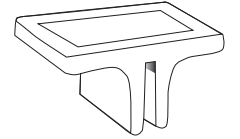

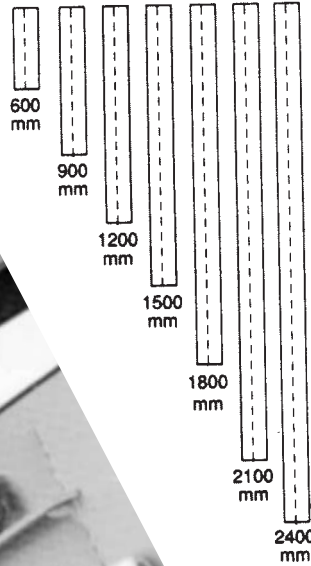

2. Fit plastic 'clips' at front and rear of shelf brackets.

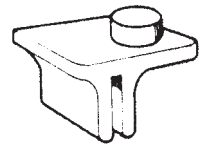

3. Fix timber shelving to the brackets by screwing through the plastic clips. For glass shelves, use plastic grommets.

Introducing a breakthrough development for grooved panels and slotted stripping...

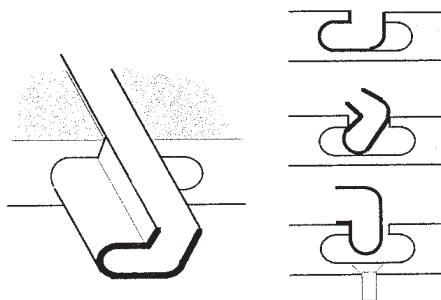

▲ FLEXIBLE LIP EXTRUSION (FL)

FEATURES, BENEFITS AND INSTALLATION:

- ▲ Screw through the slot of the grooved panel with a countersink screw.
- ▲ Clip in extrusion from the front.
- ▲ Tests have shown this method to be 50% faster to install than slide-in extrusions, onsite or in the workshop.

Hidden fixings: It is impossible to hide screw fixings in cavity installations but not with the FL extrusion.

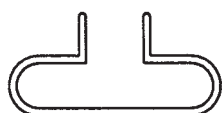

Hygienic: The flat lower lip prevents dirt build-up. The FL extrusion will also clip out for future changes.
